

ABSTRACT

PT. Arga Wastu, is a mining company stone located in Sanetan, Rembang. Mining activities include cleaning of the land, stripping, excavation, loading, and reclamation.

In carrying out the activities of mining, frequent accidents. The incidence of unsafe working conditions were derived from State courts a dangerous and unsafe workplace actions and ignore safety. Of unsafe working conditions and unsafe workplace actions that often result in work accident and eventually can cause the victim's death.

Potential accident occurred on the road leading to the mine area. The road to the mine area is an area of work is most prone to among other things because of the condition of the roads is not solid, the bends are too sharp and the actions of the driver unsafe. While the work unsafe acts most often happens is a protective tool of self abandonment by workers. Mine accidents that occurred in the year 2015 there was 1 accident. The accident happened due to an unsafe workplace actions and lack of management oversight so that residents entering the area location of processing and got hit by a wheel loader and causes the residents died.

The completion of the work safety and health problem that occurs on a PT. Arga Wastu is:

- 1. Do a repair on the unsafe conditions and unsafe workplace actions in order that the safety risks can be minimized.*
- 2. Do the coaching plus skills or training to employees in accordance with the field work.*
- 3. Give socialization to the citizens about the mine so as not to enter the mining area.*
