

## **CHINA POLICY ON REDUCING CARBON EMISSIONS AS FUEL IN 2012-2016**

### **ABSTRACT**

Cross-border air pollution in the world has led some countries to start making policies on limiting carbon emissions. One of the country with high air pollution and gas emissions is China. China's Industrialization always involves coal as the main source of its energy. Using coal as the main source energy have damaged to environmental condition, health society, and disrupt neighbouring countries. This makes the China government start to make some policy for restoration China's environment and to reform the regulation of energy consumption. One of the ways to fix China's environment which is to develop the renewable energy, to use clean fossil , and make sanction against trespasser. In the 12<sup>th</sup> Five Year Plan China's focusing on reducing carbon emissions and China's government commitment to improving environmental condition and gas emissions.
