

ABSTRACT

Rembang district is part of the full light antiklinorium zone - Madura (Van Bemmelen , 1949) . This zone as a result of acting on the rock tectonic Miocene age . This makes Rembang have a very reliable source of limestone , although the contribution of mining and quarrying in the formation of the Gross Regional Domestic Product (GDP) is still relatively moderate . It is the presence of obstacles in the way of mining, and processing results. This condition is very possible opening of opportunities for investors to invest in drembang district in order to optimally manage the limestones .

From the research, the balance sheet and the potential resources and reserves of limestone in the district showed Rembang Rp. 1.880.495.016.840,000,- Assets Liabilities value of Rp . 88.074.360.000,- in 2013. These results can be seen in the increase in the potential for limestone mining business sector in increasing local revenues in Rembang if managed properly .
