

RINGKASAN

Penelitian dilakukan di UP PARNO yang berlokasi di Desa Karangasem, Kecamatan Ponjong, Kabupaten Gunungkidul, Provinsi D.I.Y. UP PARNO merupakan salah satu perusahaan yang bergerak di bidang pertambangan yang mengelola sumber daya alam berupa batugamping.

Pelaksanaan program keselamatan kerja serta sistem manajemen keselamatan pertambangan sangat dibutuhkan untuk dapat menciptakan kondisi kerja yang aman dengan meniadakan atau menekan seminimal mungkin risiko kecelakaan kerja. Diperlukan identifikasi potensi bahaya serta analisis terhadap manajemen keselamatan kerja untuk menentukan pengendalian risiko yang dapat dilakukan UP PARNO. Potensi bahaya yang terdapat di UP PARNO rata-rata berasal dari tindakan tidak aman yang dilakukan oleh operator alat berat seperti tidak menggunakan alat pelindung diri dan mengabaikan keselamatan saat bekerja.

Dari hasil penelitian yang dilakukan, diperlukan evaluasi program-program keselamatan kerja, karyawan agar bekerja sesuai SOP yang telah dibuat serta diperlukan penerapan sistem manajemen keselamatan kerja yang sistematis meliputi elemen kebijakan dan elemen implementasi.

ABSTRACT

The study was conducted at UP PARNO located in Karangasem Village, Ponjong District, Gunungkidul Regency, D.I.Y Province. UP PARNO is one of the companies engaged in mining that manages natural resources in the form of limestone.

The implementation of work safety programs and mining safety management systems is needed to be able to create safe working conditions by minimizing or suppressing the risk of workplace accidents to a minimum. Identification of potential hazards and analysis of work safety management is needed to determine risk control that can be carried out by UP PARNO. The potential hazards found in UP PARNO on average come from unsafe actions carried out by heavy equipment operators such as not using personal protective equipment and ignoring safety while working.

From the results of the research conducted, it is necessary to evaluate work safety programs, employees to work according to the SOP that has been made and the application of a work safety management system that systematically includes the policy elements and implementation elements.
