The method of collecting data in this study uses questionnaire techniques. The number of samples in the study were 100 Auditors at BPKP DIY with census sampling techniques. Validity test uses the Pearson Product Moment correlation test, while the reliability test uses Cronbach Alpha. The data analysis technique used is multiple regression analysis, coefficient of determination, F test, and t test. The results showed that: auditor's ability does not affect the effectiveness of investigative audits, auditor experience does not affect the effectiveness of investigative audits, auditor independence influences the effectiveness of investigative audits, and whistleblowers affect the effectiveness of investigative audits

Keywords: Auditor Ability, Auditor Experience, Auditor Independence, Whistleblower, Effectiveness of Investigative Audit Implementation.
