

ABSTRACT

This study aims to analyze the effect of the number of tourist visits, the number of hotel rooms, and the number of restaurants on economic growth in districts/ cities in the Special Region of Yogyakarta (2011-2020). This study uses secondary data, namely the number of tourist visits, the number of hotel rooms, and the number of restaurants on economic growth that are already available at the Central Bureau of Statistics of the Special Region of Yogyakarta in 2011-2020. The analytical tools used are Multiple Linear Regression Panel Data and Random Effect Model (REM) as an estimation model. Based on the research conducted, it was found that there was a significant positive influence partially and simultaneously between the number of tourist visits, the number of hotel rooms, and the number of restaurants on economic growth in districts/ cities in the Special Region of Yogyakarta from 2011-2020.

Keyword: *Number of Tourist Visits, Number of Hotel Rooms, and Number of Restaurants*
