

## DAFTAR RUJUKAN

- Abo Taleb T. Al-Hameedi, et al (2020). Laboratory Study of Environmentally Friendly Drilling Fluid Additives Banana Peel Powder for Modifying the Drilling Fluid Characteristics in Water-Based Muds. Missouri University of Science and Technology.
- Akbar, Rizki, et al (2019). The Effect of Coconut Fibres, Banana Trunk Peel and Bagasse on Lost Circulation of the Drilling Fluid. Universitas Trisakti.
- Sauki, Arina, et al (2017). Development of Environmental Friendly Lost Circulation Material From Banana Peel. Universitas Teknologi MARA.
- Company, A. P. (2000). *Drilling Fluids Manual*. Chicago: Amoco Production Company. Universitas Teknologi MARA.
- Diah Pertiwi, Ayu (2019). Karakteristik Reservoir Batupasir Berdasarkan Analisis Petrofisika Dan Fasies Pada Zona A22, Formasi Balikpapan, Di Lapangan "ADP", Cekungan Kutai, Kalimantan Timur. Universitas Trisakti.
- Norizzatul Akmal, I.A., et al (2021). Potential of Banana Peels and Sugarcane Bagasse as Lost Circulation Material Additives in Drilling Mud Application.
- M.T. Al-Saba, et al (2018). Experimental Investigation of Bio-Degradable Environmental Friendly Drilling Fluid Additives Generated from Waste. Missouri University of Science and Technology.
- M. Taufik (2011). Application of Fibrous Organic Cellulose to Combat Seepage Loss in Cracked Limestone Formation, Offshore East Kalimantan, Indonesia. SPE.
- Purnomosidi (2020). Material Hilang Sirkulasi Berbahan Dasar Serat. Politeknik Energi dan Mineral Akamigas Cepu.
- Yuniardi, Yuyun (2012). Petroleum System Cekungan Kutai Bagian Bawah, Daerah Balikpapan dan Sekitarnya, Provinsi Kalimantan Timur. Fakultas Geologi, UNPAD.
