

ALVINDA KHOIRUNNISA, 2024. Partisipasi Kader Kesehatan Dalam Kegiatan Penanganan *Stunting* Posyandu Cempaka Desa Randusari Kecamatan Prambanan Kabupaten Klaten. Di bawah arahan Wulandari Dwi Etika Rini.

ABSTRAK

Penelitian ini bertujuan untuk (1) Mengkaji pelaksanaan kegiatan penanganan *stunting* Posyandu Cempaka, (2) Mengkaji dimensi partisipasi kader kesehatan dalam kegiatan penanganan *stunting* Posyandu Cempaka, (3) Mengkaji tipe partisipasi kader kesehatan dalam kegiatan penanganan *stunting* Posyandu Cempaka. Penelitian ini menggunakan pendekatan Kualitatif dengan jenis penelitian studi kasus. Informan dalam penelitian ini yaitu Bidan Desa serta perwakilan Puskesmas Prambanan sebagai informan kunci, Kelompok Kesehatan Tradisional Desa Randusari dan Kader Posyandu Desa Randusari sebagai informan utama, dan ibu balita *stunting* sebagai informan pendukung. Data yang digunakan adalah data primer dan data sekunder. Pengumpulan data menggunakan Teknik observasi, wawancara, dan dokumentasi dengan pengujian keabsahan data menggunakan triangulasi sumber. Teknik analisis data yaitu dengan reduksi data, penyajian data, penarikan simpulan dan verifikasi. Hasil penelitian menunjukkan bahwa (1) Kegiatan Penanganan Stunting Desa Randusari mendapat partisipasi kader kesehatan dalam pembuatan produk wakumambar, kegiatan posyandu stunting, PMT (Pemberian Makanan Tambahan) rutin, dan pemberian sembako. (2) Partisipasi aktif dari kader kesehatan terdapat pada dimensi perencanaan hingga evaluasi kegiatan, tidak hanya menjadi penerima manfaat, tetapi juga pelaku utama, namun keterlibatan masyarakat secara kolektif perlu dilakukan dan tantangan evaluasi produk wakumambar akan inovasi berkelanjutan perlu diatasi untuk memastikan kegiatan tetap efektif dan relevan di masa mendatang. (3) Partisipasi kader kesehatan melibatkan tipe partisipasi dari pasif hingga *self mobilization*, yang berhasil menurunkan tingkat stunting dengan signifikan sebagai bukti kesadaran dan keaktifan masyarakat dalam menjaga kesehatan dan kesejahteraan generasi masa depan.

Kata kunci: Partisipasi Masyarakat, Penanganan *Stunting*, Pos Pelayanan Terpadu (Posyandu)

ALVINDA KHOIRUNNISA, 2024. *Participation of Health Cadres in Stunting Handling Activities Posyandu Cempaka Randusari Village, Prambanan District, Klaten Regency. Under the direction of Wulandari Dwi Etika Rini.*

ABSTRACT

This study aims to (1) Assess the implementation of Posyandu Cempaka stunting handling activities in Randusari Village, Prambanan District, Klaten Regency, (2) Assess the dimensions of health cadre participation in Posyandu Cempaka stunting handling activities in Randusari Village, Prambanan District, Klaten Regency, (3) Assess the type of participation of health cadres in Posyandu Cempaka stunting handling activities in Randusari Village, Prambanan District, Klaten Regency This study uses a Qualitative approach with a case study type of research. Informants in this study were the Village Midwife as a representative of the Prambanan Health Center, Randusari Village Traditional Health Group, Randusari Village Posyandu Cadres, and mothers of stunting toddlers. The data used are primary data and secondary data. Data collection using observation, interview, and documentation techniques with data validity testing using source triangulation. Data analysis techniques are data reduction, data presentation, conclusion drawing and verification. The results showed that (1) Randusari Village Stunting Handling Activities received the participation of health cadres in making wakumambar products, stunting posyandu activities, routine PMT (Supplementary Feeding), and providing basic necessities. (2) Active participation of health cadres is found in the planning to evaluation dimension of activities, not only being beneficiaries, but also the main actors, but collective community involvement needs to be done and the challenges of evaluating wakumambar products for continuous innovation need to be overcome to ensure activities remain effective and relevant in the future. (3) The participation of health cadres involves types of participation from passive to self mobilization, which has succeeded in significantly reducing stunting rates as evidence of community awareness and activeness in maintaining the health and welfare of future generations.
