

## ***ABSTRACT***

*The researcher had conducted a study about the influence of emotional intelligence toward the level of accounting understanding with self-confidence as the moderating variable. The study was to find the empirical evidence regarding the influence of emotional intelligence toward the level of accounting understanding with self-confidence as the moderating variable. The research methods that the researcher implemented were the single linear regression and the moderating regression analysis (MRA). The data gathering was conducted by distributing the primary instrument namely the questionnaires. The number of research sample was 150 respondents from the students of Accounting Study Program. The results of the research showed that the influence of emotional intelligence with self-confidence as the moderating variable had a significantly positive influence toward the level of accounting understanding.*

***Keyword : emotional intelligence, self-confidence, simple linear regression moderating regression analysis (MRA)***
