

ABSTRACT

The title of this research is “Evaluation program socialization of youth-friendly health centers Sleman district health offices in suppressing pregnancy outside marriage”. The goal of this research is to evaluate the program used by the Sleman District Health Office in order to socialize Adolescent Friendly Health Center program. The method used in this research is descriptive of qualitative, the research done by collecting factual information that describes the existing symptoms, with studies SWOT (Strength, Weakness, Opportunities, Threats) and then identification in order to get a picture that can be evaluated. Data collection can be carried out by direct observation, interviews with sources, and record the data. The results showed that the Socialization of Youth Friendly Health Center Program conducted by the Department of Health has been realized and executed well, it is seen with his socialization are routinely held at the schools, feedback from the public on this program later, socialization through electronic media, print media, and the manufacture of other media that support the socialization of youth-friendly health center program in the form of, among others Leaflet, LCD, booklet, and brochures, as well as collaborating with cross-sectoral organizations. In addition, based on evaluations conducted on the socialization of this program there are some disadvantages such as limited human resources, lack of time counseling, and counseling time constraints and lack of networking.
